DETAILED ACTION

1. The non-final rejection as set forth in paper No.10 is withdrawn in response to applicants' request for reconsideration.

- 2. A new rejection is made as set forth in this Office Action.
- 3. Claims 15-30 are pending in the application.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 15 and 28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In reference to claim 15, applicants claim a "layer of a material that does not adhere well to copper". This renders the claims indefinite because it fails to distinctly point out how "well" the layer of material adheres to copper. Also, in reference to claim 28, applicants claim, "the process of claim 15 wherein the layer of silicon nitride...". This renders the claim indefinite because there is no mention of a silicon nitride layer on claim 28.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 2823

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 15, 16 and 26 are rejected under 35 U.S.C. 102(e) as being anticipated by Liu et al. (U.S. 6,143,657).

Liu et al. (Figs.1A-1F) teach a method of forming an adhesive layer on a copper interconnect including providing a germanium-containing layer (22) comprising copper germanide on at least one surface of a copper member (12), by providing germane over the interconnect structure; and providing a layer of a material (20) that does not adhere to copper on the germanium-containing layer (22) (column 2, line 6 – column 4, line 19).

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 17, 18, 20, 21 and 27 rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al. ('657).

In reference to claim 17 Liu et al. teach wherein the germane is at least a temperature of about 200 to about 400°C but fail to teach the germane is flowed at a temperature of about 200 to about 450°C. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use Liu et al. because the range of Liu et al. overlap the range of the claimed invention. See MPEP 2144.05 ("In the case where the claimed ranges "overlap or lie inside the ranges disclosed by the prior art" a *prima facie* case of obviousness exits").

Art Unit: 2823

In reference to claim 18, Liu et al. teach providing a gaseous composition containing germane and helium, but fail to teach the composition containing about 0.05 to about 5% of said mixture. However, the selection of the claimed range is obvious because it is a matter of determining optimum process condition by routine experimentation with a limited number of species. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to enable the above-mentioned composition range to arrive at the claimed invention.

In reference to claim 20 and 21 and 27, the teachings of Liu et al. substantially teach all aspects of the invention but fail to show the thickness of the germanium-containing layer is about 100 to about 1,000Å thick; and the thickness of the copper member is about 1,000 to about 20,000Å thick. Notwithstanding, it would have been an obvious matter of design choice bounded by well known manufacturing constraints and ascertainable by routine experimentation and optimization to choose these particular dimensions because applicant has not disclosed that the dimensions are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical, and it appears prima facie that the process would possess utility using another dimension. Indeed, it has been held that mere dimensional limitations are prima facie obvious absent a disclosure that the limitations are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical. See, for example, In re Rose, 220 F.2d 459, 105 USPQ 237 (CCPA 1955); In re Rinehart, 531 F.2d 1048, 189 USPQ 143 (CCPA 1976); Gardner v. TEC Systems, Inc., 725 F.2d 1338, 220 USPQ 777 (Fed. Cir.

Art Unit: 2823

1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984); In re Dailey, 357 F.2d 669, 149 USPQ 47 (CCPA 1966).

10. Claims 28-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al. ('657) in view of the Applicants' Admitted Prior Art.

Liu et al. substantially teach all aspects of the invention but fail to show that the material that does not adhere to copper is either silicon nitride or silicon oxide, wherein the thickness of the silicon nitride layer is about 100 to about 20,000 Å thick. However, the prior art teaches forming a material that does not adhere to a copper member, wherein the material is either silicon nitride or silicon oxide (page 1, lines 14 - 23, and page 2, lines 11 - 12). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to combine the teachings of the prior art and Liu et al. to enable to use silicon nitride and silicon oxide as material layers.

The combine teachings of the Liu et al. and the prior art fail to teach wherein the thickness of the silicon nitride is about 100 to 20,000Å thick. Notwithstanding, it would have been an obvious matter of design choice bounded by well known manufacturing constraints and ascertainable by routine experimentation and optimization to choose these particular dimensions because applicant has not disclosed that the dimensions are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical, and it appears prima facie that the process would possess utility using another dimension. Indeed, it has been held that mere dimensional limitations are prima facie obvious absent a disclosure that the limitations are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical. See, for example, In re Rose,

Art Unit: 2823

220 F.2d 459, 105 USPQ 237 (CCPA 1955); In re Rinehart, 531 F.2d 1048, 189 USPQ 143 (CCPA 1976); Gardner v. TEC Systems, Inc., 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984); In re Dailey, 357 F.2d 669, 149 USPQ 47 (CCPA 1966).

Allowable Subject Matter

- 11. The indicated allowability of claim 18 is withdrawn in view of the newly discovered reference(s) to Liu et al. ('657).
- 12. Claims 19, 22-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: Liu et al. (Figs.1A-1F) teach a method of forming an adhesive layer on a copper interconnect including providing a germanium-containing layer (22) comprising copper germanide on at least one surface of a copper member (12), by providing germane over the interconnect structure; and providing a layer of a material (20) that does not adhere to copper on the germanium-containing layer (22) (column 2, line 6 – column 4, line 19).

However, Liu et al. neither teach nor suggest wherein the germanium-containing layer is provided by providing a layer of copper germanide on the copper and then oxidizing all or a portion of the copper germanide to provide a layer of germanium oxide; wherein the germanium-containing layer is provided by providing a layer of copper germanide on the copper and then nitridizing all or a portion of the copper germanide to provide a layer of germanium nitride; and wherein the germanium-containing layer is

Art Unit: 2823

provided by providing a layer of copper germanide on the copper and then oxidizing all or a portion of the copper germanide to provide a layer of germanium oxide, and then nitridizing a portion of the copper oxide to provide a layer of germanium nitride.

Conclusion

13. Papers related to this application may be submitted directly to Art Unit 2823 by facsimile transmission. Papers should be faxed to Art Unit 2823 via the Art Unit 2823 Fax Center located in Crystal Plaza 4, room 3C23. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (15 November 1989). The Art Unit 2823 Fax Center number is (703) 305-3432. The Art Unit 2823 Fax Center is to be used only for papers related to Art Unit 2823 applications.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Julio J. Maldonado** at **(703)** 306-0098 and between the hours of 8:00 AM to 4:00 PM (Eastern Standard Time) Monday through Friday or by email via <u>julio.maldonado@uspto.gov</u>. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Olik Chaudhuri, can be reached on (703) 306-2794.

Any inquiry of a general nature or relating to the status of this application should be directed to the **Group 2800 Receptionist** at **(703) 308-0956**.
